A small program, with only one goal in mind, to help users in need to get the latest Java Runtime Environment update onto their portable storage device. A tiny package, small enough to be left on a USB stick, thus ideal for any user who has to travel or use a removable device to access their programs. No download required, just point at the destination where the JRE files should be placed, and jPortable Serial Key will get them there for you. And once they're on the storage device, you can simply disconnect the removable drive, and the programs you have already installed will work as if they were installed on the hard drive. Installing to your system: The executable installer package is only 14MB, so it's worth installing it in case you need to update the JRE on your system. Once you extract the compressed file, you will be presented with the following options, allowing you to choose the destination where the program should be installed: 1. Set to "Standard: Do not prompt for any actions" or "Custom: Prompt for all actions". I chose to prompt for all actions. 2. If the program is on the system where you are installing the program, you can select to install the files to the directory that contains the executable program. I set the option to search for jPortable on the system before it is installed. 4. The last option allows you to choose whether to register the newly created portables for use by the browser or not. I deselected that option. Setting the destination to "Yes" will register the new portable. This is recommended, as this will allow you to use the portable right after the installation is complete. 5. The "Installation directory" can be selected, but the default is fine, as the installer is going to extract to the same directory. 6. The option to extract the program into a subdirectory is also selected. Installation done: Once you select to install the JRE update, the installer will start downloading the files, and a progress bar will display the progress of the operation. Once done, the whole process can be monitored inside the installer. The following is the status of the operation while it is downloading and installing the latest JRE update: Once the operation is successfully completed, you will be prompted to restart your computer. Once this is done, you should now be able to use the JRE on the portable you just created. Downloading the update
